Response to Arguments

1. Applicants' arguments filed 8/20/01 have been fully considered but they are not persuasive. Applicants argue that since the Examples 5 and 7-12 use Vitasil® 1500 (a non-colloidal white carbon), that Miyamoto does not teach the use of colloidal silica with the specified particle sizes. Miyamoto, however, discloses the use of colloidal particles within applicants' claimed range. Applicants, on p 13 of the specification, disclose the manner by which the claimed pore volume ratio is obtained is through the addition of particles having diameters of from 10 to 300 nm. Miyamoto, on col. 4, ll 36-37, discloses that the colloidal particles used in its receptive layer have a size of 0.10 μm or below. This value falls within applicants' claimed ranges. Miyamoto further discloses the use of Snowtex®, a known colloidal silica in the art. See, e.g., Example 1. As such, the rejection is maintained for the reasons of record.
